

ABSTRACT OF THE DISCLOSURE

A lighted switch device includes one rotary knob (first operating knob); first to fourth push knobs (second operating
5 knobs); a case; a switch element and a light-emitting diode (light source), which are accommodated in the case; and an annular light conductor for transmitting exiting light from the light-emitting diode to the outer peripheral portion of the rotary knob. Plate-shaped light-shielding members are
10 disposed at the first and third push knobs, and recesses for inserting ends of the light-shielding members are formed in portions of the second and fourth push knobs opposing their respective light-shielding members.
